Education

Pune Institute of Computer Technology, Pune
Bachelor of Engineering in Computer Engineering

Expected Graduation 2027
CGPA: 9.57

Projects

TestForge - AI Powered Test Automation

- Built a full-stack AI-powered testing platform using **Next.js**, **TypeScript**, **PostgreSQL (Neon)**, **Drizzle ORM**, and **Clerk Authentication** to automate software testing workflows.
- Integrated **GitHub OAuth** and **Google Gemini** to analyze repository source code and generate structured UI, API, and authentication test cases automatically.
- Executed AI-generated **Playwright** scripts on **Browserbase** cloud browsers with execution logs, session replay, and real-time pass/fail reporting.
- Developed repository management, project configuration, test execution dashboards, and a **credit-based SaaS architecture** for scalable automated testing.

DocFlow - Automated Document Intelligence Platform | *PyMuPDF, Gemma, Chroma, Google Cloud TTS*

- Built an AI-driven **RAG pipeline** using **PyMuPDF** and **Gemma embeddings** with a **Chroma** vector database for precise semantic retrieval and instant access to relevant document sections.
- Trained a **hierarchical model** to automatically extract document titles and subheadings, enabling users to navigate documents instantly through clickable section links.
- Designed an interactive **insights feature** that summarizes key points from documents and dynamically highlights the corresponding text when users select an insight.
- Integrated a **text-to-podcast generator** powered by **Google Cloud TTS**, converting document summaries into natural, conversational audio for efficient knowledge consumption.

MeetingMind - Enterprise Meeting Intelligence

- Developed an enterprise meeting intelligence system using **LangChain RAG** with **FAISS** and speaker-aware chunking, extracting structured decisions and action items from meeting transcripts (Zoom, Teams, Google Meet).
- Built a **LangGraph**-based pipeline that assigns owners, detects deadlines, cross-references past meetings for follow-ups, and auto-generates summary emails.
- Implemented **Pinecone** vector search with org/team/date metadata filtering to power a searchable, org-wide knowledge base for querying past decisions.
- Integrated **FastAPI** with **Slack** and **Notion** webhooks to automatically push action items and summaries into team workflows.

Skills

Languages: C++, Python, Java, SQL

Frameworks & Libraries: Next.js, FastAPI, LangChain, LangGraph, Google Firebase (Auth, Firestore), Hugging Face, PyTorch

Databases: Relational (MySQL), NoSQL (MongoDB), Vector (Pinecone)

Tools & Platforms: Git, GitHub, Docker, AWS, Postman, Playwright, Android Studio

Coursework: Data Structures and Algorithms, Object Oriented Programming, Database Management Systems

Achievements

- **Competitive Programmer:** Expert at CodeForces (max. 1616, rank 763 in Round 1059 Div. 3), 4 Star at CodeChef (max. 1808, global rank 256 in Starters 186), and solver of 1000+ problems.
- **Semi-Finalist**, Adobe India Hackathon.
- Secured Runner-up (Coders Chamber) and Third place (Reverse Coding) at Xenia, organized by PICT CSI.
